Kerala JUG is attending K-JUG Monthly Meetup (February) at KeyValue Software Systems.

March 1, 2020

It was great session by Praseed Pi regarding "Psychology and Perils of Polyglot language programming".

How to Kill "Visual Basic" ?

BASIC Programming Language and Microsoft
Visual Basic battled with Delphi, PowerBuilder and Visual C++
A Virtual Machine to run all languages (CLR)
Visual Basic Programmers require VB.net (OOP extension) and a Web programming
model which mimics VB's desktop model
ASP 3.0 became ASP+ and mutated to ASP.net Webforms
Created a new language (C#) for the new platform
VB.net was not actively promoted.
Despite Microsoft's attempt to kill the language, it still survives.
